<b>Total</b>			<b>31</b>	<b>-</b>	<b>401,062</b>	<b>401,062</b>	<b>\$ 60,736</b>

**Notes:**

"Profit (FIFO)" calculates a profit for every sale equal to the sale price minus the purchase price of the earliest-purchased shares not yet matched to a sale.

The FIFO method works the same for short positions as for long positions but in the inverse—it matches purchases against the earliest sale that has not already been covered.

"# of Tweets" and "# of Discord Messages" represents the number of public Twitter posts and Discord messages, respectively, by a trader during the episode that either (i) have been alleged to be false by the DOJ or (ii) refer to ABVC

John Rybarczyk (@Ultra\_Calls / Ultra#0374)

- [1] "Profit (FIFO)" calculates a profit for every sale equal to the sale price minus the purchase price of the earliest-purchased shares not yet matched to a sale.
- [2] The FIFO method works the same for short positions as for long positions but in the inverse—it matches purchases against the earliest sale that has not already been covered.
